

# TURBO BAR

Supercharge your kite...

Radically increased turn speed and brake line depower on ANY 4-line fixed bridle kite.

Brake Lines → 1

2 ← Connect Power Lines Here → 2

## SET-UP

MONTAGE/  
ASSEMBLAGGIO/  
MONTAJE

### LINE ATTACHMENT & TRIMMING

It will be necessary to adjust the flying lines length to suit individual kites.

Attach the brake lines below the knots (1) for correct line length.  
Attach the power lines (2).  
For small adjustments without landing the kite use the "on the fly" trim adjustment (3).

## SECURITY

SECURITE/  
SICHERHEIT/  
SEGURIDAD

### PRIMARY SAFETY

Use this system FIRST in an emergency (4).

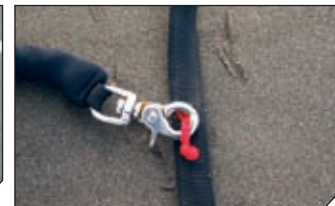

- The front lines will release.
- The kite will stall and reverse to the ground with 100% depower and zero traction.
- You will still be attached to the kite via the Chicken Loop.

### KITE LEASH SAFETY

For optimum safety, attach optional kite leash to the brake handle (5), if flying unhooked from the chicken loop.

When riding with the leash you may also release the power from the kite by pulling the chicken loop (6) towards you.

### LANDING & LAUNCHING USING THE BRAKE HANDLE

Reach up and grab the brake handle (5) and pull towards you.

The kite will depower and fall gently to the ground.  
To launch the kite simply release the brake handle.
